

PRODUCT GUIDE POLYMERS

SUSTAINABLE PACKAGING SOLUTIONS

WHO WE ARE

Dedicated to assisting companies of all sizes in finding the perfect packaging solutions for their requirements, our commitment has helped us become a key player in the packaging industry today. This achievement is the result of over 100 years of trustworthy partnerships with our customers.

DIVERSE RANGE

With a wide scope of items readily available from our stock inventory, we provide reliability and variety to suit your requirements.

Need something more specific? With over a century of experience in packaging development we can support with designing, prototyping and manufacturing your own bespoke packaging to meet your exact requirements.

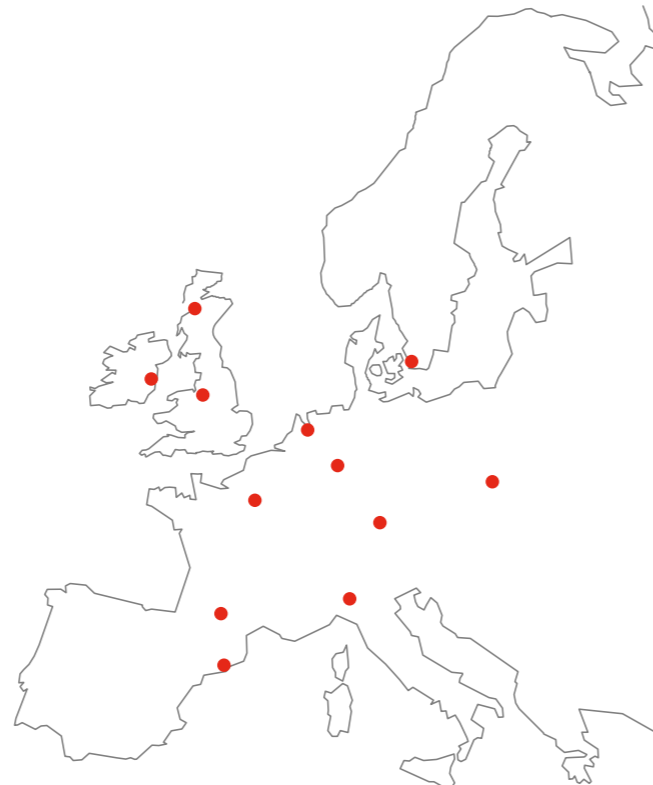

SUSTAINABILITY

At Pont, the primary focus is on sustainability, with collaborations alongside certified testing laboratories to rigorously test and ensure eco friendliness of our products. This commitment has resulted in a broad range of sustainable packaging solutions to help support you on your journey to becoming more sustainable.

To find out more about sustainable options from Pont Packaging, visit www.mygreenpackaging.com

OUR LOCATIONS

Wherever you are, our strategically placed European facilities provide dedicated and responsive support. It's not just words; it's our personal commitment to you.

THE POWER OF POLYMERS IN PACKAGING

Discover the best polymer packaging solution for your product.

The packaging of your product is a marketing tool for your brand. With the right size and shape for your product and your message, and a closure that protects and secures, your complete range will stand out with its brand continuity, your brand will stand out the best.

The bottles, jars and containers in PE, PET and PP from Pont Packaging come with following advantages:

- Sustainable packaging from recycled or biobased material
- Wide range for brand continuity
- Protection against UV radiation
- Hingegard closures for ease of use and as sustainable solution
- Secure packaging with tamper evident and child-resistant closures
- Tethered caps to comply to the European legislation
- Carbon Black Free pigments so the packaging can be easily detected and recycled
- Measuring spoons or cup for a complete packaging solution
- Possibility to create unique packaging designs
- Local partner with a European network

Find out all the packaging possibilities from Pont in our polymer packaging guide.

ABBREVIATIONS EXPLAINED:

ALU	Aluminium	MET	Metal
CBF	Carbon Black Free (pigment)	MOQ	Minimum order quantity
CT	Continuous Thread (screw neck)	PCA	Snap-on cap for plastic
CRC	Child resistant closure	PET	Polyethylene terephthalate
DIN	German and French institute for Standardisation (norm)	PP	Polypropylene
EPE	Foam seal	PS	Pressure Sensitive
GPI	Glass Packaging Institute (norm)	PVDC	Polyvinylidene dichloride
HDPE	High-density polyethylene	R3	General purpose, single start thread
HG	Hingegard (snap-on neck)	rPET	Recycled polyethylene terephthalate
IHS	Induction Heat Seal	ROPP	Roll-on Pilfer Proof
LDPE	Low-density polyethylene	TE	Tamper Evident

FOUR WAYS TO MAKE YOUR BRAND MORE SUSTAINABLE

REDUCE MATERIALS WHERE POSSIBLE

Lightweighting helps to have a positive environmental impact by reducing the overall quantity of material used. We aim to develop and produce our packaging as lightweight as possible, without compromising its functionality. While this is not possible for every item, this is an ongoing process at Pont, as we review our ranges with a focus on reducing the weight of materials.

DESIGN PRODUCTS FIT FOR RECYCLING

Design for Recycling (DfR) promotes the understanding of how recyclable your whole packaging is – the container, the closure, the label, the glue...all of it. Integrating DfR as early as possible in the process of creating and producing your packaging can make all the difference between your products being welcome – or not – in standard recycling collections. Consider transparent or light colours for PET and CBF colours for PE for the most sustainable solution.

USE RECYCLED MATERIALS

Recycled PET, recycled PE and glass are all materials that perform like their virgin versions but they use far less energy and fewer resources. They can be recycled many times without any reduction of quality. The use of light or clear colours for recycled PET products will make sure that the packaging can continue to be recycled and recycled again. Glass can even be recycled indefinitely! RPET and glass are food grade, and recycled PE is ideal for chemical and personal care applications as there is no food grade R-PE available.

By 2030, all plastic packaging must contain a certain percentage of recycled content and needs to be recyclable.

USE OF RENEWABLE MATERIALS

Reduce your carbon footprint by choosing renewable raw material made from renewable sources like sugarcane for your packaging. Biobased PE is food grade and has all the performance properties of oil-based versions, yet without the environmental negativity. Using natural raw material for your packaging is a great step towards sustainability and to reduce your global carbon footprint.

HOW TO IMPROVE THE SUSTAINABILITY OF YOUR PACKAGING?

It is important to consider what materials to use for your packaging including the label, label size, adhesive and closure to improve the sustainability of your packaging. By 2030, all packaging must be recyclable as stated in the Packaging and Packaging Waste Regulation. It is expected that the EU will set criteria and categories on the recyclability of packaging.

To make sure that products are fit for recycling and materials can be used again, we have the following recommendations:

FOR PET

- **MATERIAL:** Consider using recycled PET.
- **COLOUR:** Preferably use transparent or light blue as these colours are fully recyclable.
- **SIZE:** Avoid using a container larger than needed to pack the product.
- **LABEL:** Use labels in PE or PP.
- **LABEL SIZE:** As small as possible.
- **ADHESIVES:** The label should detach from the bottle and the adhesive layer should remain on the label without reactivation.

- **CAP:** Use a PP or a PE closure. Consider using a hingegard cap, so the cap stays attached to the jar.
- **LINER:** If liners are removed before disposal of the container they will not interrupt the recycling process of the container. Consider a hingegard cap with conus instead of a liner.
- **INKS:** Use non-toxic inks, avoid direct printing on the container.

FOR PE

- **MATERIAL:** Consider using biobased PE (food grade) or recycled PE (non food products).
- **COLOUR:** Preferably use light colours, or colours without carbon black.
- **SIZE:** Avoid using a container larger than needed to pack the product.
- **LABEL:** Use PE or PP labels without metallic.
- **LABEL SIZE:** As small as possible.
- **ADHESIVES:** Use water soluble adhesives.

- **CAP:** Use a PE, a bio-PE or a PP cap. Consider using a hingegard cap, so the cap stays attached to the jar.
- **LINER:** If removed before disposal, the liner will not interrupt the recycling process of the container.
- **INKS:** Use non-toxic, non-bleeding inks, in case of direct printing only lasermark indicating production or best before date.

HOW TO MAKE YOUR BRAND UNIQUE

4 SIMPLE STEPS TO CREATE GREAT CUSTOMER EXPERIENCE

Did you know that 90% of consumers decide to purchase only after examining the front of the packaging? Use this to your advantage when selecting your brand packaging! Consider one of these four simple steps to help your product stand out.

1

PRINT YOUR MESSAGE

The easiest and most affordable way to create a unique packaging for your product is to **print your message directly onto the closure.**

This applies only to metal smooth closures and at this moment standard only in 38 mm and 45 mm with a MOQ of 50.000 pcs.

Challenge us with your specific request for print on any kind of metal closure and we will find a solution for your packaging.

2

USE YOUR BRAND COLOUR

Using a colour that is linked to your brand identity will make your brand easily recognizable or consumers.

Your unique packaging will not only look great, it will be **automatically linked to your brand.** Imagine your product popping off the shelves with vibrant, eye-catching colours that truly reflect your brand.

A great extra when defining your personal colour is to consider carbon black free pigments (CBF) which will allow your packaging to be easily detectable and thus recyclable and makes your brand truly sustainable.

Please contact our sales team for the specific conditions.

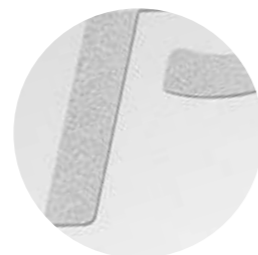

3 MAKE YOUR PACKAGING TACTILE

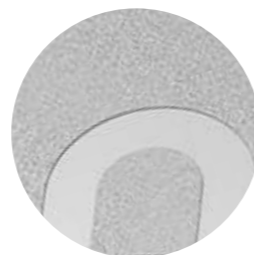

Bring your brand to life with a tactile extra dimension to your packaging. An embossed or debossed element is not only visually recognisable but can also be felt.

Whether is it your logo, your brand, a creative design or a short message, the embossing or debossing effect will truly **reflect your brand**.

The difference between embossing and debossing is that with the first, the tactile effect is raised above the surface of an item where debossing is set below the surface of an item (and thus deeper).

Embossed

Debossed

The options are endless and we are here to help you choose the best option for your product. Contact our experts for more information.

4 CREATE A UNIQUE DESIGN

Leave the competition behind by creating a design that will stand out online and on the shelf. Choose a unique design that fulfils your specific requirements and reflects your values, such as offering diet products in slim packaging. With your own packaging you can **truly reinforce your image and position in the market**.

Based on a study of your needs, our technical development team can take you through every stage of your packaging's progress. It all starts with a sketch, then it can be followed by a 3D model. When the test run is successful, the production tool will be created and the final production can start.

Let's start your packaging design journey together.

European packaging supplier PONT offers a wide range of containers and bottles in plastic (virgin, recycled or bio-based) and glass as well as associated closures and accessories.

With a network of well-stocked warehouses and sales offices strategically located throughout Europe, PONT quickly delivers efficient packaging solutions worldwide.

PONT focuses on packaging innovations and is renowned for creative and attractive designs that meet our customers' requirements.
